

At SolveIT, Inc., we believe in the saying that the customer is king. Before beginning a project, SolveIT takes into consideration the company, its business operations, the work culture, its existing business processes, and the overall climate of the industry to understand the genuine concerns and needs of our clients. We don't offer a solution to the client until we thoroughly understand the fundamental framework of our client. All of our solutions are flexible and can be highly customized to suit our clients; with SolveIT as your technology partner, companies don't have to worry about a one-size-fits-all solution.

It's in our DNA to develop solutions and applications that aren't template-driven so that our customers benefit from leveraging our technology to suit their application needs. What sets SolveIT apart from others is that we find solutions that not just solve the issues, but also help build business results for companies.

SolveIT's market differentiators include:

- High-powered growth
- A hub for technology-driven resources
- Applications that deliver growth and performance
- Core business knowledge
- Organized knowledge documentation

High-powered growth

SolveIT has achieved tremendous growth in the last two years, thanks to a robust software engineering process that has delivered resounding performance for our clients. We believe in the adage that we grow when our clients grow and we are proud that our highly customizable applications have produced quantifiable results that have accomplished revenue-driven business objectives for our clients.

A hub for technology-driven resources

The nucleus of our performance lies in a talent pool that is highly-skilled and technically proficient to offer robust applications. SolveIT is proud of its resources that it has nurtured and developed, which it owes to a strong work-ethic that has cultivated a healthy but competitive environment for its people to work on implementing highly critical projects. SolveIT's motivational HR model encourages employees to think 'outside of the box' and come up with resourceful solutions that will help our clients excel. Our resources are technically diverse and are always on the look out for emerging technologies that will help our clients achieve their business goals and maintain their competitive edge.

Applications that deliver growth and performance

SolveIT operates with a primary focus that engineering robust applications can not only solve potential technology hurdles but also help our clients grow and build steady streams of revenue. We operate with the mantra that our applications will speak for themselves. So far, SolveIT can attest that our clients have benefited from applications that are flexible yet offer pragmatic solutions and execute business challenges.

Core business knowledge

SolveIT's business model is driven by due diligence. We feel that a strong foundation can help breakthrough any barriers. Before a project is undertaken, SolveIT understands the client's business model, their underlying work culture, their business ethos, and their complex business issues. Once we discern the intricate issues, we offer a solution that is highly adaptable to our client's needs. Our solutions are flexible and can integrate with any technology platform so that our clients don't have to spend much time on acclimating to the new solution. In order to continuously improve business outcomes, we try to understand our client's business, which means going beyond the scope of the project. Finally, SolveIT goes the extra mile to make sure that our client's business challenges are solved, and foresee any potential pitfalls and steer them clear of any technology barriers.

Organized knowledge documentation

Documentation of the knowledge process is a critical stage in the overall lifecycle of a project. SolveIT understands the enormity of capturing the intellectual property involved in developing complex software applications that cater to our clients. As SolveIT acquires valuable experience resolving our client's unique business issues, we have developed a knowledge capture process that lets us store and document the technical brainstorming involved in developing the application. Every step of the application development process is mapped so that any relevant information is captured and stored for future use. The more clients we have, the better is the knowledge capture process. Currently, as SolveIT is expanding, we have developed a treasure trove of knowledge that seeks to help our clients understand more about our applications and their functionalities.
