

SharePoint Services – A robust application for a dynamic world

Are you a company that has unstructured data that struggles to locate and retrieve relevant information? Are you a company that is relying on an archaic FTP site to manage your documents? Are you a company that's on the look out for a robust mechanism that would provide intranet capabilities yet possess dynamic functionalities to manage unstructured data? Allow SolveIT to introduce you to Microsoft Office SharePoint Server 2007 (MOSS) that will cater to your document management and content management needs. SolveIT's technically competent resources possess strong understanding of MOSS and can implement the dynamic application to suit your needs and strengthen your capabilities so that you achieve reduced logistics costs and manage your business processes more efficiently.

MOSS, the latest buzz in the technology universe, lets you set up sites and websites and create shared project portals called workspaces. Within workspaces, you can store documents, contacts, calendars, and chat-like discussions for workgroup use. With SolveIT as your technology partner, we can enable users to search within your site or their respective workspaces, and also lets us to add functionality through custom .net applications that can enable you to provide tiered access to sensitive documents.

SolveIT can help you quickly create SharePoint sites that support specific content publishing, content management, records management, or your business intelligence needs. You can also conduct effective searches for people, documents, and data, participate in forms-driven business processes, and access and analyze large amounts of business data.

MOSS provides enterprise-class management tools for user administration, policy-based access and security management, relying heavily on Microsoft's Active Directory identity and policy management tool. It also allows management of identities and security across workspaces and sites, not just at the individual site but at the workspace level, too. Data integrity is a primary concern for all companies but with SolveIT's secure deployment of MOSS, companies can make sure that their critical documents are protected and can provide restricted access to authorized employees.

As an efficient content management system, SolveIT's implementation of MOSS can help you set up alerts so that your employees are informed when documents are ready for approval. MOSS can also be used as a discussion board for brainstorming and have shared specifications. The application is flexible, and can be programmed to suit your needs and can offer a robust document management mechanism that can help you access documents on the fly and make storage and retrieval of documents much easier than your existing intranet portal.

Salient features of SolveIT's MOSS 2007 implementation:

- A robust application that lets you manage your content and documentation processes effectively
- Set up sites and collaborative work spaces to create and share documents
- Offer enterprise-class management tools to manage and secure work spaces
- Restricted access to critical documents that protects data integrity
- Store and retrieve documents and go paperless and reduce your printing and shipping costs
